

Falcun Setup

git clone <https://github.com/Falcun/Falcun-6.git>

open **Falcun-6/client/gradle/wrapper/gradle.properties** in a txt editor (notepad)

change version from 4.10.3 to 2.7

go into command prompt

go to **Falcun-6/client/**

gradlew setup

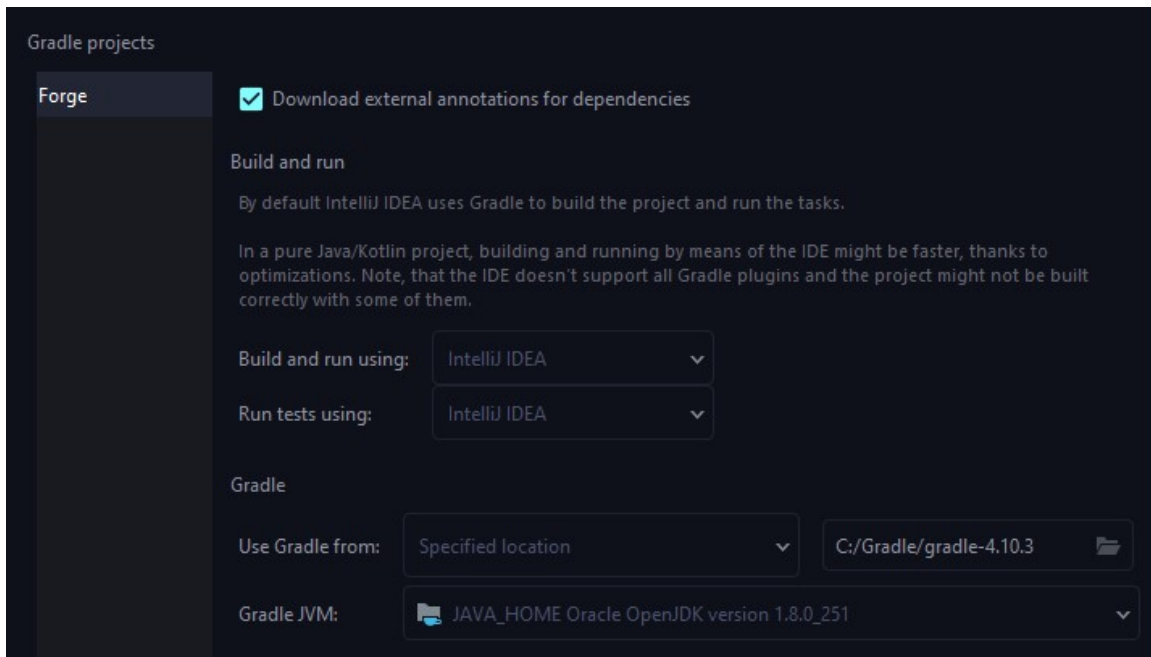

after that has finished go back and change the gradle version back to 4.10.3

<https://gradle.org/next-steps/?version=4.10.3&format=all> download this and put it in your **C:/Gradle/**, should look like **C:/Gradle/4.10.3/** when done

open intelij, do not open the project

file -> open -> **Falcun-6/client/projects/Forge/**

file -> settings -> build, execution, deployment -> build tools -> gradle ->

make it look like the screenshot i provided (put your jdk 8 version in there, doesn't have to be same java 8 version)

refresh gradle project

in intellij, go to projects / Forge / src / main / start

right click gradlestart

click debug run

setup debug run

go to Forge/src/main/java

code good or fired
